

What is claimed is:

1. A surface mounting type coil comprising:
 - a magnetic core having a hole;
 - a coil comprising windings which are wound around said magnetic core via said hole;
 - a cylindrical magnetic body which is provided around the coil;
 - a plurality of metal plate terminals to which leads of the windings are connected ; and
 - the metal plate terminals extending along an outer face of the cylindrical magnetic body from a bottom face to a top face thereof, and being secured to the cylindrical magnetic body in such a manner that tips of the metal plate terminals are within the thickness of the cylindrical magnetic body; wherein the magnetic core is a two-hole type core.
2. A surface mounting type coil comprising:
 - a magnetic core having a hole;
 - a coil comprising windings which are wound around said magnetic core via said hole;
 - a cylindrical magnetic body which is provided around the coil;
 - a plurality of metal plate terminals to which leads of the windings are connected; and
 - the metal plate terminals extending in a C-shape along an outer face of the cylindrical magnetic body from a bottom face to a top face thereof, and being secured to the cylindrical magnetic body in such a manner that tips of the metal plate terminals are within the thickness of the cylindrical magnetic body wherein the magnetic core is a two-hole type core.
